

Non-Sterile Patient Apparel

Enabling preparation of a patient for a procedure or surgery 365 Healthcare offer a range of Examination gowns and suits to give the patient modesty and help the clinician access prior to a procedure. Materials used are for their lightweight nature and providing a good bacterial barrier.

Patient Examination Gowns

Patient examination gowns are manufactured from soft, heavy gauge, non-woven material and are suitable for patient use only. Short sleeves are used when performing line insertion, and are cooler in the summer. With ties at the neck and waist, examination gowns overlap at the back to provide full, cool, comfortable and dignified cover.

5519		27 gsm	Blue	-	50

SSMMS Patient Examination Gowns

SSMMS Patient gowns are available providing patient dignity in a hospital environment. The material is soft enough to be comfortable and sufficiently strong to be tear-resistant and not see-through, even if wet. The gowns are sleeveless allowing for access under the arms to the patient's upper body.

Non-Sterile Clinician Apparel

365 Healthcare offer an alternative to re-usable scrub suits and warming jackets, the ranges are designed to offer a credible alternative to the reusable option more commonly seen in hospitals. As single use apparel these provide the lowest risk alternative to reusable, where it is critical to minimise the risk of virus spread and infection.

Scrub Suits

365 Healthcare single use scrub suits are used by theatres and in acute environments. Supplied in a darker blue to offer the clinician modesty. Scrub suits are made from SMS material, used for its low linting properties and acceptance in a clinical environment.

Single use scrub suits provide an excellent way of reducing the risk of infection, as viral microorganisms are disposed of with the single use item. The weave is closer on single use scrub suits and therefore less likely to allow skin migration.

Warming Jackets

365 Healthcare warming jackets support control requirements and also give clinicians an extra layer of comfort in a clinical environment which may be subject to temperature controls.

Warming jackets are supplied in long and short sleeves with elasticated cuffs as standard, to ensure a good fit and prevent bacteria and possible shedding of skin. All warming jackets are supplied with popper fastening front and pockets for ease of donning and removal.

Non-Sterile Gowns

Non sterile gowns are used in environments where protection is needed for the user but may also need a bacterial barrier to reduce the risk of fluid splashes or provide a barrier against viruses and infection.

Long Sleeve Fluid Protection Gowns

Long sleeve fluid protection gowns are manufactured from soft durable polyethylene material. Impervious to fluids, they provide an effective barrier against infection. They are suitable for staff working outside the sterile field and visitors in theatres, and in areas such as isolation, delivery suites, burn units, laboratories and mortuaries.

Long Sleeve PP Gowns

Low cost, long sleeve examination gowns manufactured from soft, heavy gauge polypropylene (PP) material, with elasticated cuffs. Premier examination gowns overlap at the back to provide full, comfortable and dignified cover. Packaged individually and suitable for use by patients and/or staff.

Non-Sterile Patient Apparel

Working closely with clinicians we 365 Healthcare have developed a more specialist range of Patient apparel. These ranges have been developed with multiple acute hospitals providing care to patients in Cardiac units. They provide solutions to very specific situations and are now seen as an integral part of a patients admission to the ward before a procedure.

Cardiac Patient Suits

Patient suits have been designed for specialist cardiac units to enable the best care for patients prior to and following major cardiac surgery. The hook & loop strips at the neck, torso and in the leg ensure that clinical staff can administer care quickly in the event of an emergency.

Patient Ward Gown

Patient ward gowns have been designed for use by in-patients prior to and following major cardiac surgery, or those patients who have been in hospital for a day case procedure.

The patient ward gown has been designed in conjunction with a hospital trust's group of Theatre Managers who felt the existing well know cotton gown, needed some modernising. The hook & loop strips at the back of the gown ensure patient comfort and adjustment to a range of patient sizes. Additional these fastenings at the back of the gown enable simple access for Clinical staff.
